## **News Release --- News Release --- News Release**

### **Singulating V-Scored PCBs up to 24” long.**

**The K3000 can safely singulate standard and Aluminum panels.**

Depanelizing 18" and up to 24" skip scored PCBs is made easy and convenient with the K3000 Linear blade PCB singulators. These "Made in the USA" manual PCB depanelizers are available in two versions. Simply place the bottom score-line of the PCB onto the linear blade and pull the circular blade across the top score-line to cleanly separate the PCB panels. An adjustable front and back table can be tilted so that separated panels can slide onto a conveyor line. Both regular FR4 and Aluminium or Copper pre-scored panels can be separated using this equipment.

Adjustable blade guards on each side of the circular blade provide operator protection from the working area. These can be moved up and down in order to provide a gating gap so only the score-line of the PCB can pass between the guard and the linear blade. Blades are made of long lasting tool steel.

Also available from FKN Systemk is a motorized linear blade PCB depanelizer which separates panels when the operator steps on a foot switch. These are offered in 18" , 24" and 36" or 48 " versions..
